
We carry a complete line of centerless grinder blades and guides for the Landis Cincinnati grinders, past and current designs, as well as blades for all makes of grinders. Our stock includes standard blades and guides for Landis Cincinnati, Monza, Royal Master, Supertec and Unison grinders to name a few. Specials and step blades can be manufactured to your specifications.

Blade material is a factor that can affect the quality of surface finish obtainable on centerless round ground work. There are several materials from which the wearing surface of the blade is made. We offer five different blade materials: dense cast iron, high speed steel, tungsten carbide, Ampco 21 bronze and ceramic.

Reconditioning of worn or damaged workrest blades is a service provided by us to save you money. We can restore blades to the accuracy of your original blade using one piece tungsten carbide.

Accessories for centerless grinders are also provided by us: Workrests, bar fixtures, truing cams, gibs, v-chutes, and air ejectors.

Our service and quality are unmatched in this field. Please contact us if we can assist you with any of your centerless tooling needs.
